

Phase 1: Memorizing

(per session, append-only)

Session 1

Session 2

Session 3

...

↓ Extract facts
(thinking LLM)

Append-only Fact List (~1600 facts)

Archive (ChromaDB)

Raw conversation chunks + fact vectors

Analytical result

Interpreter output

Phase 2: Structuring

(periodic, first 30K serialized characters)

Typed state modules (Code)

Python REPL -> exact aggregation

Multi-Strategy Retrieval

Code + Facts + Archive → Answer

Question-answering result

LLM over retrieved evidence

Structure
(thinking LLM)
